Abstract

The use of information systems and technology in BPPK of Finance Ministry is good, but has not worked maximized. It makes the business process not work and coordinate well, so it effects to the management. Therefore, the design of enterprise architecture is required to support the business strategic and technology in the future. The complete framework also needed to support enterprise architecture that can be well defined. In this study, TOGAF framework will be applied in BPPK. As the result, this framework will produce an enterprise architecture that contained data architecture, application architecture, technology architecture, and the implementation plan that will be used by the organization to achieve their goal.
