ABSTRACT

The aim of this research is to find out about the effect of religiosity, media pornography exposure, and permissive parenting style simultaneously towards sexual behavior of Christian adolescent in West Savu and Raijua. Samples of this research are 258 of middle and late adolescent. Data was collected by spreading psychological scale. There were four scales, which were sexual behavior scale (Soetjningsih, 2008^a), religiosity scale (Azam et al., 2012), media pornography exposure scale (Soetjningsih, 2008^a), and permissive parenting style scale (Robinson et al., 1995). All data is analyzed with multivariate double linear regression analysis by SPSS Windows 17.0 program. The result showed that religiosity, media pornography exposure, and permissive parenting style simultaneously affected sexual behavior of adolescent in West Savu and Raijua ($R^2 = 0,448$, $F_{hitung} = 30,882$; in significance level $0,000 < 0,05$) for male adolescent, and $R^2 = 0,611$ $F_{hitung} = 66,975$; in significance level $0,000 < 0,05$) for female adolescent.

Keywords: Religiosity, media pornography exposure, permissive parenting style, sexual behavior.
