Abstract

Technological advancements nowadays have enabled chatting via Bluetooth connection. Bluetooth is a wireless protocol for exchanging data over short distances from fixed and mobile devices such as mobile phones. Bluetooth based chat is not something entirely new, but it supports one on one chat only. A server application that allows group Bluetooth based chat with certain added function is created for this reason. The server application can be used to create a new room, transfer files, save chatting history, and control client access. The room created can be utilized for either one on one or group chat, and can be closed if unused.

Keywords: Public Chatting, Private Chatting, Bluetooth, Room
