## PERNYATAAN TIDAK PLAGIAT

Saya yang bertanda tangan di bawah ini:

Nama : MARLIN . YUVIMA . TILENG  
NIM : 972011010 Email : marlintileng@gmail.com  
Fakultas : TEKNOLOGI INFORMASI Program Studi : MAGISTER SISTEM INFORMASI  
Judul tugas akhir : THE PERFORMANCE ANALYSIS OF CIVIL SERVANT USING FUZZY  
INFERENCE SYSTEM - SUGENO METHOD in DEPARTMENT OF  
POPULATION TOMOHON  
Pembimbing : 1. PROF . DR . IR . EKO SEDIYONO , M.KOM  
2. IRWAN SEMPIRING , M, KOM

Dengan ini menyatakan bahwa:

1. Hasil karya yang saya serahkan ini adalah asli dan belum pernah diajukan untuk mendapatkan gelar kesarjanaan baik di Universitas Kristen Satya Wacana maupun di institusi pendidikan lainnya.
2. Hasil karya saya ini bukan saduran/terjemahan melainkan merupakan gagasan, rumusan, dan hasil pelaksanaan penelitian/implementasi saya sendiri, tanpa bantuan pihak lain, kecuali arahan pembimbing akademik dan narasumber penelitian.
3. Hasil karya saya ini merupakan hasil revisi terakhir setelah diujikan yang telah diketahui dan disetujui oleh pembimbing.
4. Dalam karya saya ini tidak terdapat karya atau pendapat yang telah ditulis atau dipublikasikan orang lain, kecuali yang digunakan sebagai acuan dalam naskah dengan menyebutkan nama pengarang dan dicantumkan dalam daftar pustaka.

Pernyataan ini saya buat dengan sesungguhnya. Apabila di kemudian hari terbukti ada penyimpangan dan ketidakbenaran dalam pernyataan ini maka saya bersedia menerima sanksi akademik berupa pencabutan gelar yang telah diperoleh karena karya saya ini, serta sanksi lain yang sesuai dengan ketentuan yang berlaku di Universitas Kristen Satya Wacana.

## Lembar Pengesahan

Judul Tesis : The Performance Analysis of Civil Servant using Fuzzy Inference System – Sugeno Method in Department of Population Tomohon  
Nama Mahasiswa : Marlin Yuvina Tileng  
NIM : 972011010  
Program Studi : Magister Sistem Informasi  
Fakultas : Teknologi Informasi

Menyetujui,

Prof. Dr. Ir. Eko Sedyono, M.Kom

Pembimbing 1

Irwan Sembiring, M.Kom

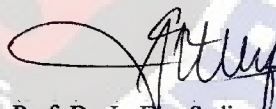

Pembimbing 2

Mengetahui,

Dr. Dharma Putra Palekahelu, M.Pd

Dekan

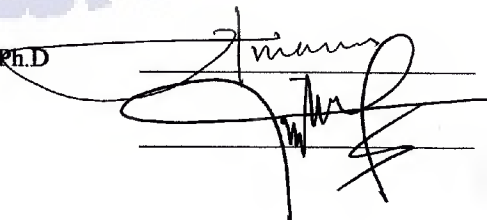

Prof. Dr. Ir. Eko Sedyono, M.Kom

Ketua Program Studi

Dinyatakan Lulus Ujian Tanggal: 19 Desember 2013

Penguji:

1. Prof. Ir. Danny Manongga, M.Sc., Ph.D
2. M. A. Ineke Pakereng, M.Kom

## Pernyataan

Tesis berikut ini:

Judul : The Analysis Assessment Performance Employee in the Department of Population Tomohon by Using Fuzzy Inference System Sugeno Method

Pembimbing : 1. Prof. Dr. Ir. Eko Sedyono, M.Kom  
2. Irwan Sembiring, M.Kom

adalah benar hasil karya saya:

Nama : Marlin Yuvina Tileng  
NIM : 972011010

Saya menyatakan tidak mengambil sebagian atau seluruhnya dari hasil karya orang lain kecuali sebagaimana yang tertulis pada daftar pustaka.

Pernyataan ini dibuat dengan sebenarnya sesuai dengan ketentuan yang berlaku dalam penulisan karya ilmiah.

Salatiga, Desember 2013

( Marlin Yuvina Tileng )

## Kata Pengantar

Segala puji syukur dan kemuliaan hanya kepada Tuhan Yesus Kristus atas segala kasih karunia-Nya, kesehatan serta kekuatan, sehingga penulis dapat menyelesaikan tesis yang berjudul **“The Performance Analysis of Civil Servant using Fuzzy Inference System – Sugeno Method in Department of Population Tomohon”**. Penyusunan tesis ini merupakan salah satu syarat untuk memperoleh gelar *Master of Computer Science* (M.Cs) dalam bidang Sistem Informasi program Pascasarjana, Fakultas Teknologi Informasi, Universitas Kristen Satya Wacana Salatiga. Penyelesaian tesis tidak lepas dari bimbingan, arahan dan bantuan dari berbagai pihak, dan dalam kesempatan ini penulis hendak mengucapkan terima kasih dan penghargaan yang tinggi kepada yang terhormat :

1. Bapak Dr. Dharma Putra Palekahelu, M.Pd, selaku Dekan Fakultas Teknologi Informasi Universitas Kristen Satya Wacana Salatiga.
2. Bapak Prof. Dr. Ir. Eko Sedyono, M.Kom, selaku Ketua Program Studi Magister Sistem Informasi Universitas Kristen Satya Wacana Salatiga, dan juga sebagai dosen pembimbing pertama yang bersedia memberikan bantuan, dorongan dan semangat serta arahan dan bimbingan selama dalam penyusunan tesis ini.
3. Bapak Irwan Sembiring, M.Kom, yang telah bersedia menjadi dosen pembimbing kedua, yang bersedia membimbing dan juga mengarahkan selama penyusunan tesis ini.
4. Seluruh dosen Program Studi Magister Informasi, yang telah banyak memberikan ilmu selama dalam perkuliahan, serta seluruh staff yang sudah membantu dalam pengurusan administrasi.
5. Pemerintah Kota Tomohon yang dalam hal ini Bapak Walikota Tomohon yang telah memberikan izin untuk melanjutkan studi.

6. Kepala Dinas Kependudukan dan Catatan Sipil Kota Tomohon serta seluruh staff yang telah memberikan dukungan serta bantuan.
7. Papa,dan Mama selaku orang tua terbaik yang telah banyak memberikan bantuan baik moril maupun materiil, yang tidak pernah bosan memberikan dorongan, dukungan, masukan, arahan terlebih selalu mendoakan penulis. Terima Kasih juga karena kalian menjadi inspirasi dan penyemangat.
8. Kakak-kakak, Adik, Oma, Keponakan, terima kasih banyak buat dukungan dan juga doa kalian.
9. Teman-teman MSI angkatan VIII : Kak Boni, Kak Rita, Widi, Isadora, Pak Andi, Aci, Daniel, Arao, terima kasih buat kebersamaannya selama di MSI, terima kasih buat canda tawa, kehangatan dan dukungan yang diberikan. Sukses buat kita semua.
10. Teman terdekat yang selama ini juga turut memberikan bantuan, dukungan serta bersedia berbagi : Kak Boni, Kak Rita, Catur dan Kristian terima kasih banyak sudah menjadi teman yang baik buat penulis baik dalam suka maupun duka.

Tesis ini masih jauh dari kesempurnaan. Oleh karena itu penulis mengharapkan kritik dan saran yang membangun dari para pembaca . Terima Kasih. Tuhan Yesus Memberkati.

## **ABSTRACT**

Employee performance assessment is a way to know the quality of work performed by employees. This research was conducted to analyze the performance of existing employees in the Department of Population in Tomohon City by using Fuzzy Inference System Sugeno Method. Fuzzy model used the Sugeno fuzzy model order one. The process by doing subtractive clustering to form membership functions and generate cluster centers and sigma, and the clustering of subtractive fuzzy inference system will be established to create a rule. Overall analysis and variables is processed by using Matlab R2013a application assistance. In this research, the establishment of rule divided into two, namely staff and managers. Staff have four rules, while managers have five rule.

## **Keywords**

**Assesment Performance, Fuzzy Logic, Fuzzy Inference System Sugeno Method.**

## **1. INTRODUCTION**

Performance assessment is a way to know the capabilities of each employee in an organization, because assessment of the managers can obtain materials considerations for developing human resources in the organization that he leads. On government agency, Civil Servants is required in organizing the task of government in community service apparatus because they are servant of country and community too. In an effort to improve the quality of performance of an employee, the government issued Government Regulation on Job Achievement Assessment of Civil Servant (Government Regulation No. 46/2011).

Employee performance assessment is very necessary in government agency, as it aims to gives evaluation for employees to improve performance. Assessment system conducted in each department in Tomohon, especially in the Department of Population under Government Regulation on List Of Assessment Work (Government Regulation No. 10/1979), List Of Assessment Work consists of eight (8) elements assessed, which consists of loyalty, achievement, responsibility, devotion, honesty, cooperation, initiative and leadership. Each element of the assessed valuation in the figure. if 91-100 (very good), 76-90 (good), 61-76 (enough), 51-61 (medium) and 50 and below (less). In the reality the objective of this assessment system is still less and just a formality, so that the performance assessment becomes invalid. Assessment system with List Of Assessment Work tended as a formality only and not directly related to what is done by civil servants.

This research was conducted to generate evaluation system of employee performance to became objective. Determination of criteria and sub-criteria assessment based on List Of Assessment Work. The completion of this research using Fuzzy Inference System of Sugeno method order one, which includes fuzzification process, the establishment of the rule, then defuzzikasi and testing.

## **2. LITERATURE REVIEW**

### **2.1 Research Preview**

Research to determine how much laboratory assistants will be accepted at the time of recruitment by using fuzzy inference system sugeno method. This research is done to calculate the total of ideal assistant for a laboratory. The research result is a supporting tool for determine the ideal sum of accepted laboratory assistant in the recruitment

process using rules, criterion that already determined such as previous total number of assistant, outgoing assistant and sum of practice participant [1]. Fuzzy inference system sugeno method also is used to predict bottled mineral water production. This research goal is to predict how many production total by applying the fuzzy inference system sugeno method order one based on variables total of demand, total of stock, production machine capability and available production cost [2]. Fuzzy inference system sugeno method to analyze the health, safety, and environment (HSE) in the combustion unit. The research is done to analyze the most suitable event, condition and application pattern for cement industry in determining HSE. The final result is the suitable sugeno method to determine the HSE value. The simulation design on the combustion unit of cement industry is using some membership functions such as trapezium, triangle and gaussian [3].

In this research, the fuzzy inference system with the Sugeno method is used to analyze employee performance assessment based on the variables input of criteria and sub-criteria. The end result is the establishment of the rule of staff and leadership, and also the grading of performance

## 2.2 Assessment Performance Employee

Performance assessment of civil servants is done periodically. The performance grading goal is to oversee the end result of civil servant in doing his duty and also to see the shortage and the excess of civil servant in doing his duty. The performance grading result is used as consideration material in the coaching of public officer, such as promotion, the appointment of position, education and training, also award give away. The performance grading of civil servant is based on Government Regulation No. 10 year 1979. The components graded are: loyalty, achievement, responsibility, devotion, honesty, cooperation, initiative and leadership. Each component graded has sub-components. The grade for implementation of work is stated in words and numbers below: [4]

very good = 91 - 100  
 good = 76-90  
 enough = 61-75  
 medium = 51-60  
 less = 50 and below

## 2.3 Fuzzy Logic

Fuzzy logic is a logic that has fuzzy value or vagueness between right and wrong. In theoretical fuzzy logic, a value can be right and wrong at the same time. But how big is the “right” and “wrong” of

the value is dependent on membership weight that it has [5]. Fuzzy logic is a method of problem solving that is very robust with a variety applications embedded and information processing. Fuzzy provides a simple way to infer from vague, ambiguous and imprecise information. [6]. Fuzzy logic is a way to map the input into an output space. Fuzzy logic use a kind of word term to describe the value of a variable. Fuzzy logic work by using degree of membership of a value and then used to determine the expected result based on determined specification. [7].

## 2.4 Fuzzy Inference System (FIS) Sugeno Method

Fuzzy inference system is a popular methodology to implement fuzzy logic. Fuzzy inference system is one of the most famous applications of fuzzy logic and fuzzy set theory [8].

Sugeno method is introduced by Takagi-Sugeno Kang in the year 1985, so it also called TSK method. The system output (consequence) of Sugeno method is not in form of fuzzy sets but a constant or linear equation. According to Cox (1994), TSK method has two forms:

1. Sugeno model order zero

The form in general:

**IF** ( $x_1$  is  $A_1$ )**o**( $x_2$  is  $A_2$ )**o**( $x_3$  is  $A_3$ )**o...o**( $x_N$  is  $A_N$ )  
**THEN**  $z=k$

Where  $A_i$  is the  $i$ -the fuzzy set as the antecedence and  $k$  is a clear constant as the consequence.

2. Sugeno model order one

The general form is :

**IF** ( $x_1$  is  $A_1$ ) **o...o** ( $x_N$  is  $A_N$ ) **THEN**

$z=p_1 * x_1 + ... + p_N * x_N + q$

Where  $A_i$  is the  $i$ -th fuzzy set as antecedence and  $p_i$  is the  $i$ -th firm constant and  $q$  also is a contant in the consequence.

The defuzzification process is done by calculating the average value. In this research the membership function for Sugeno method ordo one is using Gaussian bell membership function, the equation is : [9]

$$f(x, \sigma, c) = e^{-\frac{(x-c)^2}{2\sigma^2}} \dots\dots (1)$$

## 2.5 Subtractive Clustering

Subtractive Clustering based on the size of potential (density) of data points in some space. The basic concept ofsubtractive clusteringis determining the

area within variable that has highest potential compared to other data point. A data point which has highest neighbor will become a cluster center, after subtracted with its density. The algorithm will chose other point that has highest neighbor to become the next cluster center. This process will iterate until all data points is tested.. If there are  $N$  data :  $X_1, X_2, \dots, X_n$  and we state that the data is already normalized, the density of point  $X_k$  can be calculated using equation:

$$D_k = \sum_{j=1}^N \text{Exp} \left( - \frac{\|X_k - X_j\|}{(r/2)^2} \right) \dots (2)$$

Where  $\|X_k - X_j\|$  is the distance between  $X_k$  and  $X_j$ , and  $r$  is positive constant known as radius. After calculating the density of each points, then the point that has the highest density is chosen as cluster center. Then, other point's density surrounding the chosen point will be subtracted using equation:

$$D_k = D_k - D_{C1} * \text{exp} \left( - \frac{\|X_k - X_{C1}\|}{(r_b/2)^2} \right) \dots (3)$$

Where  $r_b$  is a positive constant. The result of subtractive clustering is a cluster center matrix ( $C$ ) and sigma ( $\sigma$ ) that will be used in Gaussian bell membership function. [10]

## 2.6 Establishment of Fuzzy Inference System with Subtractive Clustering

The design of fuzzy inference system based on the clustering result for Sugeno Method order one. Beforehand, we separate the input variables from output variables. For example, the number of input variable is  $m$ , and the output variable is  $i$ , the rules can be formed as followed lists:

- [R1] IF ( $x_1$  is  $A_{11}$ ) o ( $x_2$  is  $A_{12}$ ) o...o ( $x_n$  is  $A_{1m}$ )  
 THEN ( $z = k_{11}x_1 + \dots + k_{1m}x_m + k_{10}$ )
- [R2] IF ( $x_1$  is  $A_{21}$ ) o ( $x_2$  is  $A_{22}$ ) o...o ( $x_n$  is  $A_{2m}$ )  
 THEN ( $z = k_{21}x_1 + \dots + k_{2m}x_m + k_{20}$ )
- ...
- [Rn] IF ( $x_1$  is  $A_{n1}$ ) o ( $x_2$  is  $A_{n2}$ ) o...o ( $x_n$  is  $A_{nm}$ )  
 THEN ( $z = k_{n1}x_1 + \dots + k_{nm}x_m + k_{n0}$ )

where :

- $A_{ij}$  is the  $i$ -th rule and  $j$ -th variable of fuzzy sets as the antecedence
- $K_{ij}$  is the coefficient of the fuzzy output equation for  $i$ -th rule and  $j$ -th ( $i=1,2,\dots,r$ ;  $j=1,2,\dots,m$ ), and  $k_{i0}$  is the constant for the fuzzy output equation for  $i$ -th rule

- “o”-sign is used as the operator of the antecedence (in this research, it's a product operator)

The number of rules created will the same as the cluster formed on previous step. For example, if the clustering process produce 5 cluster center, the fuzzy inference system rules will also have 5 rules. [9]

## 3. METODOLOGY RESEARCH

In this research there are steps that will be done:

1. Problem identification, i.e. determining the criterion and sub-criteria that will be used to grade
2. Data gathering. In this step, manager grade it's staff based on the criterion and sub-criteria that already determined.
3. Data processing that include:
  - Fuzzification process which is: creating fuzzy set for each input variable and output variable. In this step we use subtractive clustering to get the membership function (MF) needed.
  - Rule base forming by combining some input variable. We complete the steps by carrying clustering product into next step which is creating the consequence equation of the fuzzy rule base.
  - The affirmation by defuzzification method using weighted average to get final Z value of the employee grade

## 4. RESULTS AND ANALYSIS

### 4.1 Determination of Criteria and Sub Criteria

Grading criteria used is based on List Of Assessment Work grading that currently used in Department of Population when grading it's officer. The grading criteria can be seen at Table 1.

**Table 1. Criteria of List Of Assessment Work Grading**

No	Grading Criteria
1.	Loyalty
2.	Achievement
3.	Responsibility
4.	Devotion
5.	Honesty
6.	Cooperation
7.	Initiative
8.	Leadership

Each criteria or grading component on List Of Assessment Work has sub-criteria based on Government Regulation No. 10 year 1979. These sub-criteria can be seen at Table 2.

**Table 2. Sub-criteria of List Of Assessment Work Grading**

<b>Criteria</b>	<b>Sub-Criteria</b>
Loyalty	Never doubt the truth of Pancasila in words, attitudes, behavior and deeds.
	Highly honor the country and the government, always accentuate the country prominence above the self prominence, someone, or group.
	Try to deepen the knowledge about Pancasila and Constitution of the Republic of Indonesia 1945, and always try to learn the state policy, government politics, and the government plans in order to do their work effectively and efficiently.
	Not involved as sympathizer or member of group that try to change or betray Pancasila dan UUD 1945.
	Not deliver languages or sentences or do something that can change or betray Pancasila, UUD 1945, the country, and government.
Achievement	Have skills in doing his/her duties.
	Have experience in their field or other field that correspond with the duties.
	Mean to do his/her duties and without considering time.
	Do his/ her duties effectively and efficiently.
Responsibility	The work result extend the standard work, in quality and quantity.
	Always finish their duties well and on time.
	Always in the work place in any condition.
	Always accentuate the official prominence more than self prominence, someone, or group.
	Never blame to others for the mistakes made.
	Never doubt the truth of Pancasila in words, attitudes, behavior and deeds.
	Brave to endure the risks made or the things done.
Devotion	Brave to endure the risks made or the things done.
	Obeys the constitution and the civil laws applied.
	Obeys well the civil order that given by the head authorized.
	Obeys the work time provision.
	Give best service as their fields.
Honesty	Behave politely.
	Do their duties sincerely.
	Not misapply authority.
Cooperation	Report the work results to the head appropriately.
	Know deeply others duty that correspond with his/her duty.
	Appreciate others opinion.
	Can adjust his/her opinion with others, if they are true.
	Want to consider and accept good opinion from others.
	Always able to cooperate with others as the time and duty scheduled.
Initiative	Always ready to accept the decision made even though not agree.
	Without waiting direction and order from the head, make own decision or do something needed in doing his/her duty as long as not contradict with the head general policy.
	Try to find new work procedures to obtain efficiency and maximum results.
Leadership	Give advice that considered good and useful for the head, asked or not asked that correspond with the duty.
	Master the entirety of duties

Criteria	Sub-Criteria
	Make decision well and quickly
	Give opinion clearly to others
	Able to decide the priority well
	Act firmly and not take sides
	Give good examples
	Try to bring up and develop cooperation
	Know the ability and the limitation of subordinates
	Try to arouse spirit and activate the subordinates in doing their duties
	Pay attention to the chance and support the development of subordinates
	Want to consider the subordinates advices

## 4.2 The Analysis using Fuzzy Inference System - Sugeno method

In this research, there are two steps that need to be done. First, subtractive clustering and then second, building fuzzy inference system using fuzzy subtractive clustering. The first step is needed to build the membership function (antecedence part of the rule) where the second step's goal is to build Z part of the rule (consequence) using least squared method.

### 4.2.1 Subtractive Clustering

In the subtractive clustering, we need to input which data that need to be clustered. Data is taken from list of assessment work grading. (see table 3)

Table 3. List Of Assessment Work Grading

No	C1	C2	C3	C4	C5	C6	C7	Cr

22	90,6	91,67	92	92,2	90,33	92,17	90,67	91,38
23	90,6	91	91,57	91,2	90	93	90	91,05
24	91,6	89	92,14	92,2	91	91,33	91	91,18

We define some constant parameter for subtractive clustering, i.e. radius, squash factor, accept ratio, reject ratio, minX, maxX as such:

$$\text{radius} = 0.3$$

$$\text{sqshFactor} = 1.25$$

$$\text{acceptRatio} = 0.5$$

$$\text{rejectRatio} = 0.15$$

$$\text{minX} = 0 \quad 0 \quad 0 \quad 0 \quad 0 \quad 0 \quad 0 \quad 0$$

$$\text{maxX} = 100 \quad 100 \quad 100 \quad 100 \quad 100 \quad 100 \quad 100 \quad 100$$

Next, we normalize the input data:

$$X_{ij} = \frac{X_{ij} - XMin_j}{XMax_j - XMin_j}, i = 1, 2, \dots, n; j = 1, 2, \dots, m \dots (4)$$

Next, we calculate the first potential (density) of each data point and choose the highest density (potential) by using the equation (2). Density result : (see Table. 4)

Table 4. Point Of Data Potential

1	2	3	4	5	6	7	8
2.7399	1.2254	2.5945	2.4571	6.7421	7.2475	6.9547	6.8704
9	10	11	12	13	14	15	16
7.0147	4.0299	4.0204	3.6160	4.3069	4.2177	7.3455	6.7209
17	18	19	20	21	22	23	24
5.6734	3.5981	5.1795	4.6581	4.4109	4.8047	4.7963	4.6968

From the above matrix, we can see that the highest density is on data point 15 which is 7.3455. Therefore, the 15-th data point is chosen as cluster center.

After we choose the highest potential (density) then we loop the process. In this research, there are 4 loops. Iteration stops at the fourth loop because there are no data point that have potential to be cluster center. Iteration will be stop when the ratio < reject ratio. The iteration process will produce number of cluster, cluster center and sigma.

Equation for cluster center:

$$Center_{ij} = Center_{ij} * (XMax_j - XMin_j) + XMin_j \dots (5)$$

Equation for cluster sigma :

$$\sigma_j = r_j * (Xmax_j - XMin_j) / \sqrt{8} \dots (6)$$

As the end result on the fourth iteration with radius=0.3; accept ratio = 0.5; reject ratio=0.15; squash factor = 1,25; minX=[0 0 0 0 0 0 0] and maxX=[100 100 100 100 100 100 100]; we got four cluster which has center (C):

87.80	71.67	70.28	75.00	78.67	74.50	74.67	76.08
90.60	91.67	92.00	92.20	90.33	92.17	90.67	91.38
73.00	47.00	49.00	47.60	46.67	43.17	44.67	50.31
76.40	56.67	65.28	56.60	55.00	54.33	52.67	60.31

and sigma (σ) :

10.61	10.61	10.60	10.61	10.61	10.61	10.61	10.61
-------	-------	-------	-------	-------	-------	-------	-------

#### 4.2.2 Establish a Fuzzy Inference System with Subtractive Clustering

Next step is to complete the consequence part of the fuzzy rule using sugeno method order one. We take the cluster center and sigma from previous step as such:

$$C = \begin{pmatrix} 87.8000 & 71.6667 & 70.2857 & 75.0000 & 78.6667 & 74.5000 & 74.6667 & 76.0800 \\ 90.6000 & 91.6667 & 92.0000 & 92.2000 & 90.3333 & 92.1667 & 90.6667 & 91.3762 \\ 73.0000 & 47.0000 & 49.0000 & 47.6000 & 46.6667 & 43.1667 & 44.6667 & 50.3143 \\ 76.4000 & 56.6667 & 65.2857 & 56.6000 & 55.0000 & 54.3333 & 52.6667 & 60.3143 \end{pmatrix}$$

$$\sigma = (10.6066 \ 10.6066 \ 10.6066 \ 10.6066 \ 10.6066 \ 10.6066 \ 10.6066 \ 10.6066)$$

The equation is solved based on the resulting cluster thus we can obtain Z equation for each rule as the output. The process is by calculating degree of membership for each data point and then normalize until we get U matrix. The matrix U is obtained by using the equation:

$$d_{ij}^k = X_{ij} * \mu_{ki} \text{ dan } d_{i(m+1)}^k = \mu_{ki} \dots (7)$$

Normalization process is calculated by dividing  $d_{ij}^k$  and  $d_{i(m+1)}^k$  against total degree of membership of data point  $i$  on cluster  $k$ :

$$d_{ij}^k = \frac{d_{ij}^k}{\sum_{k=1}^r \mu_{ki}} \dots (8)$$

$$d_{i(m+1)}^k = \frac{d_{i(m+1)}^k}{\sum_{k=1}^r \mu_{ki}} \dots (9)$$

The solution is below:

Rule number 1

Degree of membership for each data point on rule (cluster)

1

The next process is the same for each rule (cluster) up to rule #4 to obtain final normalized U matrix. The z vector as the output vector is in form of:

$$Z = [z_1 \ z_2 \ \dots \ z_n]^T$$

From vector k, matrix U and vector z are then formed this linear equation:

$$U * k = z$$

The above equation is used to find output coefficient value for each rule for each variables ( $k_{ij}$ ,  $i=1,2,\dots,r$ ; and  $j=1,2,\dots,m+1$ ). Matrix U is not a square matrix, that's why we use least squared method to solve the above equation.

This is normalized U matrix:

0.0000	0.0000	0.0000	0.0000	0.0000	0.0000
0.0000	0.0000	0.0000	0.0000	0.0000	0.0000
0.0000	0.0000	0.0000	0.0000	0.0000	0.0000
0.0000	0.0000	0.0000	0.0000	0.0000	0.0000
0.0000	0.0000	0.0000	0.0000	0.0000	0.0000
0.0000	0.0000	0.0000	0.0000	0.0000	0.0000

Using least squared method, we can get the following k coefficients:

0.6313	2.2082	-0.0399	0.5428	0.5829	0.2715	0.3723	-267.8862
-238.3828	-217.6611	317.4616	199.0879	-426.9637	190.2301	166.7087	0
0.2478	0.3535	0.2015	0.1209	-0.0003	0	0	0
0.1857	0	0.369	0.2013	0	0	0.2032	0

From the k coefficients matrix above, we can build Z part for each rule, so that:

$$Z_1 = 0,6313X_1 + 2,2082X_2 + (-0,0399X_3) + 0,5428X_4 + 0,5829X_5 + 0,2715X_6 + 0,3723X_7 + (-267,8862)$$

$$Z_2 = -238,3828 X_1 + (-217,6611X_2) + 317,4616 X_3 + 199,0879X_4 + (-426,9637X_5) + 190,2301X_6 + 166,7087X_7 + 0$$

$$Z_3 = 0,2478X_1 + 0,3535X_2 + 0,2015X_3 + 0,1209X_4 + (-0,0003X_5) + 0X_6 + 0X_7 + 0$$

$$Z_4 = 0,1857X_1 + 0X_2 + 0,3690X_3 + 0,2103X_4 + 0X_5 + 0X_6 + 0,2032X_7 + 0$$

The above process is the calculation process for staff, the same process is performed for building Z part for manager's rule until we obtain the k coefficients matrix below:

0,66605743	-0,04975054	0	0,27951477	0	0	0	0
0	0,46211815	0	0	0	0	0,16290604	0
0	0	0	0,203285960	0	0,79504179	0	0
0,58525386	0	0	0,31827622	0	0	0	0
0,6602402	0	0	0	0	0	0	0

And thus, we produce these Z equations:

$$Z_1 = 0,66605743X_1 + (-0,04975054X_2) + (0X_3) + 0,27951477X_4 + 0X_5 + 0X_6 + 0X_7 + 0X_8 + 0X_9$$

$$Z_2 = 0X_1 + 0,46211815X_2 + 0X_3 + 0X_4 + 0X_5 + 0X_6 + 0,16290604X_7 + 0X_8 + 0X_9$$

$$Z_3 = 0X_1 + 0X_2 + 0X_3 + 0,20328596X_4 + 0X_5 + 0X_6 + 0,79504179X_7 + 0X_8 + 0X_9$$

$$Z_4 = 0,58525386X_1 + 0X_2 + 0X_3 + 0,31827622X_4 + 0X_5 + 0X_6 + 0X_7 + 0X_8 + 0X_9$$

$$Z_5 = 0,6602402X_1 + 0X_2 + 0X_3 + 0X_4 + 0X_5 + 0X_6 + 0X_7 + 0X_8 + 0X_9$$

As we can see, there are differences between staff's rules and Manager's rules, which is, there are four rules for staff, where the rules for manager is five.

4.2.3 Establishment of Rule

In this research, the rules is categorized into two parts: for staff and for manager. Staff has 4 rules where manager has 5 rules. The following lists are rules for staff:

- [R1] IF(C1 is in1cluster1) and (C2 is in2cluster1) and (C3 is in3cluster1) and (C4 is in4cluster1) and (C5 is in5cluster1) and (C6 is in6cluster1) and (C7 is in7cluster1) THEN (out is Z1)
- [R2] IF(C1 is in1cluster2) and (C2 is in2cluster2) and (C3 is in3cluster2) and (C4 is in4cluster2) and (C5 is in5cluster2) and (C6 is in6cluster2) and (C7 is in7cluster2) THEN (out is Z2)
- [R3] IF(C1 is in1cluster3) and (C2 is in2cluster3) and (C3 is in3cluster3) and (C4 is in4cluster3) and (C5 is in5cluster3) and (C6 is in6cluster3) and (C7 is in7cluster3) THEN (out is Z3)
- [R4] IF(C1 is in1cluster4) and (C2 is in2cluster4) and (C3 is in3cluster4) and (C4 is in4cluster4) and (C5 is in5cluster4) and (C6 is in6cluster4) and (C7 is in7cluster4) THEN (out is Z4)

These are rules for Managers:

- [R1] IF(C1 is in1cluster1) and (C2 is in2cluster1) and (C3 is in3cluster1) and (C4 is in4cluster1) and (C5 is in5cluster1) and (C6 is in6cluster1) and (C7 is in7cluster1) and (C8 is in8cluster5) THEN (out is Z1)
- [R2] IF(C1 is in1cluster2) and (C2 is in2cluster2) and (C3 is in3cluster2) and (C4 is in4cluster2) and (C5 is in5cluster2) and (C6 is in6cluster2) and (C7 is in7cluster2) and (C8 is in8cluster5) THEN (out is Z2)
- [R3] IF(C1 is in1cluster3) and (C2 is in2cluster3) and (C3 is in3cluster3) and (C4 is in4cluster3) and (C5 is in5cluster3) and (C6 is in6cluster3) and (C7 is in7cluster3) and (C8 is in8cluster5) THEN (out is Z3)
- [R4] IF(C1 is in1cluster4) and (C2 is in2cluster4) and (C3 is in3cluster4) and (C4 is in4cluster4) and (C5 is in5cluster4) and (C6 is in6cluster4) and (C7 is in7cluster4) and (C8 is in8cluster5) THEN (out is Z4)

[R5] IF(C1 is in1cluster5) and (C2 is in2cluster5) and (C3 is in3cluster5) and (C4 is in4cluster5) and (C5 is in5cluster5) and (C6 is in6cluster5) and (C7 is in7cluster5) and (C8 is in8cluster5) THEN (out is Z5)

After we form both rules for staff and manager, we must put these rules on test then compare it to existing List Of Assessment Work. Beforehand, we must calculate z and alpha-predicate for each rule. Both values will be used on defuzzification process using weighted average method as seen on this equation:

$$Z = \frac{\alpha_1 z_1 + \alpha_2 z_2 + \dots + \alpha_n z_n}{\alpha_1 + \alpha_2 + \dots + \alpha_n} \dots\dots(10)$$

In the following part, we will take one example each from performance grading and fuzzy calculation process for staff and manager. (see Table. 5 and Table. 6)

**Table 5. Staff's average grade for each category**

Cr	1	2	3	4	5	6	7
Nilai	72,6	69,3	68,2	67,7	67,3	68,1	69,5

**Table 6. Manager's average grade for each category**

Cr	1	2	3	4	5	6	7	8
Nilai	90,5	73,4	71,9	73,8	73,3	72,7	72,5	72,6

From the table above, we must calculate z and alpha-predicate value for each rule. Alpha-predicate can be obtained by multiplication all  $\mu$  values. The  $\mu$  values are degree of membership values that calculated using equation (1). On the next following tables, we can observe the value of z and alpha-predicate for each rules: (see Table. 7 – Table 14)

**Table 7. Z1 value for Staff**

Cr	X	k	k*x
1	72,6	0,63128469	45,8312683

		$\alpha$ -predikat		0,01603532

The z value and alpha-predicate value for [R2] are 66.4012091 and 0.01603532.

Using the same method, we can compute z and alpha-predicate value for Manager's rules (see Table. 15 – Table. 24).

**Table 15. Z1 value for Manager**

9		0	0
Z5			59,75173831

**Table 24. Degree of membership each criteria for [R5]**

Cr	X	$\sigma$	c	$\mu$
1	90,5	0,10606602	90,4	0,64118039
2	73,4	3,65927759	56,1666667	1,527E-05
3	71,9	4,10627009	52,5714286	1,5443E-05
4	73,8	3,7335238	56,2	1,4945E-05
5	73,3	3,74766594	55,6666667	1,5585E-05
6	72,7	3,8890873	54,3333333	1,4353E-05
7	72,5	4,20728535	52,6666667	1,4945E-05
8	72,6	3,95336973	54	1,5607E-05
$\alpha$ -predikat				1,179E-34

The z value for [R5] is 59.75173831 with alpha-predicate 1.179E-34.

After we got all of z value and alpha-predicate value for each rule for staff and manager, we can use equation (10) to find final grade (Z) for each staff and manager. We take one example from staff grading:

$$Z = \frac{0,11272201 * 48,58863647 + 1,4134 E - 07 * (-1455,1075) + 2,1698 E - 06 * 64,3910159 + 0,01603532 * 66,4012091}{0,1127220 + ,4134 + E - 07 + 2,1698 E - 06 + 0,01603532}$$

$$Z = 50,8055732$$

The next after we got final Z value is to describe this value in the same manner as List Of Assessment Work ranging, so, that staff is in the range “Medium”. Using the same

method, we grade other staff and compare all the result with List Of Assessment Work.

This one is an example for manager grading using defuzzification.

$$Z = \frac{2,39124E-06 * 77,2546985 + 1,9554E-32 * 729801884 + 6,3405E-38 * 72,6430343 + 0,0890725 * 76,4542592 + 1,179E-34 * 59,7513831}{2,39124E-06 + 1,9554E-32 + 6,3405E-38 + 0,0890725 + 1,179E-34}$$

$$Z = 76,4542807$$

Based on the Z value and applied to List Of Assessment Work ranging, the manager is in the range of “Good”. We use the same method for other manager and compare it with existing List Of Assessment Work grading system :

**Table 25. Comparison between Fuzzy Inference Systems with List Of Assessment Work**

No	C1	C2	C3	C4	C5	C6	C7	C8	List Of Assessment Work Grade	Fuzzy Grade	Fuzzy Description	List Of Assessment Work Description
1	76,4	53,67	60,42	54,2	53	54,16	56,33	0	58,6	58,6	medium	medium
2	76,4	56,67	65,28	56,6	55	54,33	52,67	0	60	60,31	medium	medium
3	90	73	73	73,2	72,67	72,5	72	0	75,25	75,27	medium	medium
4	90,4	56,16	52,57	56,2	55,67	54,33	52,67	0	59,68	58,41	medium	medium
5	91	90,67	90,42	91	91	91	91	90,9	90,84	90,84	very good	very good
6	90,4	90,5	90,42	90,6	91	90,67	90,67	90,45	90,54	90,57	very good	very good
7	90,4	90	90,14	91,4	90,67	90,67	92,33	90,63	90,65	90,68	very good	very good
8	90,8	89,83	91,28	89,4	90	90,83	91	90,63	90,52	90,52	very good	very good

Based on the above table, we can see how fuzzy inference system we built compared to List Of Assessment Work. Grading using proposed fuzzy inference system has almost the same result as List Of Assessment Work where the description from fuzzy inference system compared to List Of Assessment Work is 100% the same. This shows us that Fuzzy Inference System using sugeno method can be applied for staff performance grading.

**5. CONCLUSION**

Based on the discussed result above we can conclude that fuzzy inference system using sugeno method order one can be applied into employee performance assessment system of Departement of Population in Tomohon City. Performance grading would be objective because for each criterion there are more sub-criteria that should be graded until we got averaged graded for the criteria. Rule modeling is separated into two parts, i.e. for staff and manager. For staff, there are four rules where for manager, there are five rules.

There should be further research using the same model and method to achieve higher result using more data

sample. In the future research, ones should build more complex system using mode variable category.

## **IJCA December 2013 Edition: Letter of Acceptance(3)**

**Editor IJCA**

**06 Des 2013**

Dear Marlin Yuvina Tileng, Eko Sedyono and Irwan Sembiring,

We are delighted to inform that your research paper has been “**Accepted for Publication**” in International Journal of Computer Applications (IJCA) **December 2013 Edition**.

**Paper Title:** The Analysis Assessment Performance Employee in the Department of Population Tomohon by using Fuzzy Inference System Sugeno Method

**Paper Reference ID:** pxc3892936

The important deadlines regarding publication are as follows:

- Camera ready paper submission : **December 16, 2013**
- Copyright transfer : **December 16, 2013** ([IJCA Copyright Form](#))
- Publication fees transfer : **December 16, 2013**

The research article will be published in IJCA Digital Library on **December 18, 2013**.

All the selected papers will be published in IJCA Digital Library with initial indexing with Google Scholar, CiteSeer, UlrichsWeb and ScientificCommons Index, University of St. Gallen, Switzerland. The articles are also indexed with SAO/NASA ADS Physics Abstract Service supported by Harvard University and NASA, Informatics and ProQuest CSA Technology Research Database. International Journal of Computer Applications is a voting member of CrossRef, USA and each of its research articles is allotted a unique DOI reference.

### **Article Processing Fees**

- Processing charge for each general paper : USD 62.50

The Charges includes publication, indexing, maintenance of link resolvers and journal infrastructures.

**Payment Transfer:** Please use the “**IJCA Payment Gateway**” powered by **PayPal Ltd, USA** [through this link](#) to transfer the processing fee amount. **Alternatively**, the charges can be transferred using wire facility via banks. Find attached the Payment Instructions

for the same. The invoice/ receipt will be delivered to you on subject to realization of the payment.

You are requested to re-submit your paper as **Camera Ready Copy (CRC) in DOC/DOCX and/or Latex file format** conforming to the prescribed **IJCA Paper Template** on or before **December 16, 2013**. Also find attached the copy of the **Review Report** upon your research article along with the IJCA template.

**IMPORTANT:** Conformance to IJCA template is mandatory for inclusion and citation with Google Scholar, CiteSeer, UlrichsWeb, NASA ADS and ProQuest CSA Technology Research Database.

Thank you for your association with IJCA.

Best regards,  
Editorial Support Team,  
International Journal of  
Computer Applications,  
Foundation of Computer Science,  
New York, USA.
